

Workforce Modeling

Workforce Modeling allows you to "remodel" the health characteristics of your workforce to identify your annual savings achieved through the attainment of a healthier employee population. It is a simple, yet accurate, tool intended to financially quantify how much your firm can save through targeted health promotion.

Workforce Modeling

Workforce Modeling identifies several modifiable health characteristics that, if left untreated, may result in increased health related claims. The figures presented represent the total number of employees, within your workforce, who represent each of the listed medical conditions. This valuable tool allows you to "remodel" the health characteristics of your workforce to determine how much you can save annually in reduced claims and enhanced productivity by achieving a healthier workforce.

To use the Workforce Modeling component of the program, simply adjust the figures in the center column to represent the workforce health objective you choose to attain. Then "click" the calculate button to reveal your annual savings as a result of attaining your objective.

Modifiable Health Risk Characteristics	Estimated Current Employee Count	Targeted Employee Count	Total Estimated Annual Savings
High Blood Pressure	432	432	\$0
Diabetes Type 2	179	179	\$0
Smoke Cigarettes	422	422	\$0
